

SUMMARY

I am computer engineer with a robust background in software development, systems design, and hardware integration. Proficient in programming languages such as Python, PHP, CSS, Reactjs, Nodejs and Java, with a solid understanding of algorithms, data structures, and database management. Demonstrates expertise in developing scalable solutions, optimizing system performance, and troubleshooting complex technical issues with a track record of successful project management, collaborative problem-solving, and driving innovation in fast-paced environments.

EDUCATION

Sal Colloge Of Engineering

Computer Engineering
2021-2024

L.J. University

Diploma Of Computer Engineering
2019 - 2021

SKILLS

- Python
- PHP
- CSS
- Java
- Data Analytics
- Communication
- Problem solving
- Data Evaluation
- teamwork and collaboration
- Reactjs
- Nodejs

CERTIFICATIONS

- **Data analytics and Data management** --
-Google Coursera
- **Data Visualization**
-Google Courser
- **Digital Marketing**
-Goverment of India
- **Swaraj Quiz**
-Goverment of India

EXPERIENCE

PHP Devloper - Intern

v3cube Technolabs | 01/2024 - 06/2024

- Identified areas for improvement, narrowing focus when making changes.
- Developed and maintained web applications using PHP Javascript, HTML and CSS.
- Redesigned sites to enhance navigation and improve visual appeal

Python Devloper - Intern

Seawind solutions | 09/2023 - 12/2023

- Utilized python libraries such as NumPy and Pandas for data analysis and data manipulation tasks.
- Identified needs of customers promptly and efficiently.
- Made improvements to the applications with the help of python and it's libraries.

Full stack Devloper

Procuregenie | 12/2024

- Designed and developed full-stack web applications to support procurement and workflow management processes.
- Worked across frontend and backend systems to build scalable, maintainable features.
- Collaborated with stakeholders to understand customer requirements and translate them into effective technical solutions.
- Improved existing application performance and functionality through code optimization and feature enhancements.
- Utilized modern development tools and frameworks to ensure reliability, efficiency, and a smooth user experience.

PROJECTS

[Content library for website development](#)

- This content library is a comprehensive resource designed to empower website creators with everything they need to build, design, and optimize stunning websites.
- Our content library is a trusted resource for creating dynamic, high-performance websites our library provides the tools and knowledge to achieve your web development goals.

Facial Recognition system for Attendance

- Our Facial Recognition Attendance System offers a cutting-edge solution for streamlined and accurate attendance management.
- Our Facial Recognition Attendance System simplifies attendance management, enhances accuracy, and promotes a modern, efficient approach to workforce tracking. Ideal for businesses, educational institutions, and other organizations, it offers a sophisticated solution to streamline daily operations and improve overall productivity.

TodoChimp – Task Management & Progress Tracking System

TodoChimp is a comprehensive task management system designed to streamline task assignment and tracking within an organization. Tasks are assigned to individuals, and every action—such as updates, progress changes, and completions—is recorded to maintain a complete task history.

The system enables teams to:

- Clearly view assigned tasks
- Track task progress in real time
- Maintain a transparent activity history for accountability
- Improve collaboration and workflow efficiency

Ideal for industries, startups, and teams, TodoChimp helps individuals stay organized while allowing managers to monitor progress and performance effectively, ensuring smoother project execution and better productivity.

AI Service – Custom Prompt & AI Integration Platform

AI Service is a flexible and scalable platform that allows users to create and manage custom AI prompts to generate intelligent, context-aware responses. Users can define their own prompts based on specific requirements, enabling tailored AI outputs for different use cases.

This service is designed to seamlessly integrate with other projects developed by me, acting as a centralized AI layer that enhances functionality across multiple systems. By exposing reusable APIs, the AI Service enables features such as automated insights, smart responses, content generation, and intelligent decision support within existing applications.

Key highlights include:

- User-defined custom prompt creation
- Dynamic AI response generation
- Reusable and centralized AI APIs
- Easy integration with existing and future projects
- Scalable architecture for multiple use cases

Ideal for modern applications and enterprise systems, the AI Service simplifies AI adoption by providing a unified, customizable, and efficient solution that adds intelligence to products without increasing complexity.
